

9022 SERIES Pop-In Mount / Dual Head Concealed Warning LEDs

The 9022 dual head concealed LED warning light is specifically designed for vehicle headlight and tail light applications. The optic design produces wide angle light dispersion and maximizes light reflected off the vehicle light casing. In addition the LEDs' low profile allows mounting in small, confined light casings typical of tail lights and modern car headlights. The LED design offers major advantages over strobe versions. All control electronics are situated in a sealed, in-line driver module so no remote power supply is required. Multiple flash patterns are included and multiple units can be synchronized to flash alternately or simultaneously. Additional benefits of LED technology include high intensity light output, low current draw and a long and maintenance free service life. And, they're covered by a full 5-year warranty.

Models

PART NO.	VDC	AMPS	FLASH PATTERNS	ILLUMINATION COLOR(S)	MOUNT
9022XX	12 / 12-24	0.7-2.0	16	Choose Color	1" Hole

Replace X in part number with desired LED color: A = amber, B = blue, C = clear, R = red

Features and Benefits

- Dual head design eases installation and reduces cost.
- Amp connectors between head and power supply unit allows easy wire routing
- Four 1-watt high-intensity LED's per head provide exceptional warning
- Wide angle light dispersion maximises light casing reflection
- 16 Flash patterns including single, double, triple, quad, deci and cycle all
- Multiple heads are synchronizable (simultaneous or alternating operation)
- In-line waterproof driver module eliminates the need for a remote power supply
- UV stabilized polycarbonate lens, nickel plated housing and 9' cable
- CE, R10
- Warranty: 5-year

LED HEAD

DRIVER MODULE

Solid Color:

160+ Lumens	155+ Lumens
660+ Lumens	123+ Lumens

Flash Patterns

Flash patterns are selected by touching the blue wire momentarily to power; the LED head will cycle through the available patterns.

STANDARD PATTERNS			
#	PATTERNS	FREQUENCY	DESCRIPTION
1	Quad Flash	1.25 Hz	75 Quad FPM
2	Double Flash	1.25 Hz	75 Double FPM
3	Triple Flash	1.25 Hz	92.3 Triple FPM
4	Deciblast	1.25 Hz	85.5 Deci FPM
5	Single Flash	1.25 Hz	75 Single FPM
6	Mega Flash	1.25 Hz	114 Single FPM
7	Triple+Burst	1.25 Hz	82.5 Triple + Burst FPM
8	Steady On		Steady On

CYCLE PATTERNS			
#	PATTERNS	FREQUENCY	DESCRIPTION
9	Cycle All		Cycle through patterns 1 to 7
10	Double-Triple + Burst		2 Double, 2 Triple + Burst cycle
11	Cycle Classic		1 Double, 1 Quad, 2 Mega cycle
12	Quad-Mega		3 Quad, 4 Mega cycle
13	Single-Quad		2 Single, 2 Quad cycle
14	DeciBlast-Quad		2 DeciBlast, 2 Quad cycle
15	Single-Triple-DeciBlast		2 Single, 2 Triple, 2 DeciBlast cycle
16	Mega-Triple+Burst		1 Mega, 1 Triple+Burst cycle

Alternating/Simultaneous Flash Selection

The yellow wire on each LED head is used to determine alternating or simultaneous operation with other heads in the system that are connected using the blue wire. The yellow wire has no function when 'Steady On' flash pattern is selected.

- Connect the YELLOW wire to either POWER or GROUND
- Heads with YELLOW connected to POWER fire SIMULTANEOUSLY with other heads connected to POWER
- Heads with YELLOW connected to GROUND fire SIMULTANEOUSLY with other heads connected to GROUND
- Heads with YELLOW connected to POWER fire ALTERNATELY with other heads connected to GROUND

Note: The blue wires of all LED heads must be connected together for the alternating/simultaneous function to operate.

Wiring Diagram

The diagram below shows a typical installation of two dual head HIDE-A-LEDs[™] using an on/off & pattern select switch. The front and rear pair of heads are configured to flash alternately with each other using the blue wire to connect the two with the yellow wire on one connected to ground and the yellow wire on the other connected to power.

The two heads on each dual head HIDE-A-LED[™] are prewired to flash alternately with each other.

Product Update

For ease of installation HIDE-A-LEDs[™] products incorporate a connector between the LED head and power module. This will allow you to route the wires from each head individually to the power module eliminating the need to drill large pass thru holes. If installed in a wet area the connections can be sealed with RTV as shown below.

Pricing and Part numbers will remain the same.
